

Automatic Vehicle Weighing Software

Automatic Vehicle Weighing Software (Autoweigh) is application software for automatic vehicle weighing processes using weight indicator in dynamic mode of environment.

This system can manage regular weightment of all type of vehicles, data storage and printing weightment slip. In addition to weightment, system also generates date, shifts, weighbridge and vehicle type and operator wise reports. Autoweigh having the features of data managements like invoicing, resource utilization, modify transaction of user entry, reprint slip, data upload and close pending transactions.

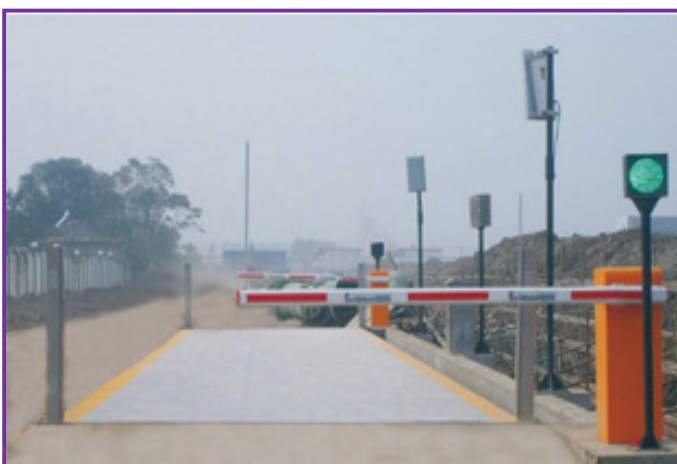

This system provides the tools to users to change password, main screen picture, company address, ticket & report format design, software configuration as client or client and centralized PC or client and server data base, server configuration to set the server details, weighbridge configuration, to reset the ticket number and software online activation.

This system provides the diagnostic facility for weighbridge calibration and testing, weighbridge checking, system log data, settings and calibration reports. This system will have fat client architecture to transfer the weightment details into specified SAP, ERP, Cloud, Shared or Main server database in online and offline mode.

Salient Features

- Measures Tare, Gross and Net Weight
- Fully Automatic Weighing
- Can be use unidirectional and bidirectional movement
- Connect to any Weight Transmitter
- Real Time data acquisition
- Better accuracy
- Connect to RFID / Card Reader / ANPR
- Vehicle Position System using PLC and sensors
- Auto store and print
- Control the signal light and boom barrier
- Can be preload the vehicle information from the master
- Weightment Data to ERP/SAP or Server database or Text file
- Report generation with all date, period, shift, vehicle, operator wise etc.
